

Did You Know?

Greenhouse Staff manage the application of shading the greenhouse glass to reduce risk of contaminating the environment with shading material?

Here is what we do:

- ✓ Apply shading material only as needed
- ✓ Apply shading only when weather will remain clear until material is well dried
- ✓ Always use shading formulations that are easily removed
- ✓ Allow shading to be removed by snowfall or on schedule with water & scrubbing

Most newer greenhouses have automated shading with movable curtains, eliminating the need to apply shading materials
